

12/15/98

THE COMMISSIONER OF PATENTS AND TRADEMARKS
WASHINGTON, D. C. 20231

Case Docket No. 11702

Sir:

Transmitted herewith for filing is the patent application of
 Inventor PEGGY L. KNIGHT
 For FACE LIFTING WIG

Enclosed are:

☒ 1 sheets of informal drawings.

☐ An assignment of the invention to _____

☐ A certified copy of _____ application.

☒ An associate power of attorney.

☐ A verified statement to establish small entity status under
 37 CFR 1.9 and 37 CFR 1.27.

☐ An Information Disclosure Statement

☒ Declaration and Power of Attorney

☒ Verified Statement Claiming Small Entity

The filing fee has been calculated as shown below:

	(COL. 1)	(COL. 2)
FOR	NO. FILED	NO. EXTRA
BASIC FEE
TOTAL CLAIMS	19-20 =	* 0
INDEP CLAIMS	3- 3 =	* 0
<input checked="" type="checkbox"/> MULTIPLE DEPENDENT CLAIM PRESENTED		

*If the difference in Col. 1 is less than zero, enter "0" in Col. 2.

SMALL ENTITY	
RATE	FEE
.....	\$ 380
x\$ 9 =	\$ -0-
x\$ 39 =	\$ -0-
x\$ =	\$
TOTAL	\$

OTHER THAN A SMALL ENTITY	
OR	RATE
OR
OR	x\$ 18 =
OR	x\$ 78 =
OR	x\$ =
OR	TOTAL

Please charge my Deposit Account No. 15-0550 the amount of \$ _____.
 A duplicate of this sheet is enclosed.

A check in the amount of \$ 395. to cover the filing fee is enclosed.

☒ The Commissioner is hereby authorized to charge payment of the following fees associated with this communication or credit any overpayment to Deposit Account# 15-0550. A duplicate copy of this sheet is enclosed.

☒ Any additional filing fees required under 37 CFR 1.16.

☐ Any patent application processing fees under 37 CFR 1.17.

☒ The Commissioner is hereby authorized to charge payment of the following fees during the pendency of this application or credit any overpayment to Deposit Account No. 15-0550. A duplicate copy of this sheet enclosed.

☐ Any patent application processing fees under 37 CFR 1.17.

☐ The issue fee set in 37 CFR 1.18 at or before mailing of the Notice of Allowance, pursuant to 37 CFR 1.311 (b).

☐ Any filing fees under 37 CFR 1.16 for presentation of extra claims.

Respectfully submitted,

I hereby certify that this correspondence is being deposited with the United States Postal Service as first class mail in an envelope addressed to:
 Assistant Comm. of Patents, Washington, D.C. on 12/8/98
 20231 (Date of Deposit)

FACE LIFTING WIG

Background of the Invention

Field of the Invention

5 The present invention relates to wigs and, more particularly, to a wig which lifts or hyperextends the skin over a person's face.

Description of the Related Art

10 The use of wigs and hairpieces has increased greatly over the past several years. In general, most wigs are comprised of a hair net having a bottom surface structured for placement over the user's head and a top surface having hair thereon.

 Over the years several improvements in wig design have been developed. For instance, many wigs include a coating around the outer perimeter of the hair net to create a more stable and resilient structure which will better adhere to a person's head than hair nets without such coating.

15 The desire to lift the skin over a person's face has also increased greatly over the past several years. Such desire is especially common amongst women and entertainers seeking to change or improve their appearance. Other than surgery, such lifting is accomplished today by placing a thin resilient strip of material, having tape on both ends, over a person's head and lifting or hyperextending the skin on the person's face upward under the tape.

20 Although these prior art devices are useful for their intended purposes, they are limited to the specific problem and function for which they were designed and are incapable of addressing the problem discovered by applicant and solved by applicant's invention. Specifically, applicant has discovered the need for a wig capable of also achieving the face lifting function. Currently, someone desiring the use of a wig and a face lift, without surgery, will place the face lifting strip
25 over their head and then a conventional wig over the strip. There is nothing in the prior art which teaches or suggests the use of a single structure to accomplish both purposes.

 Accordingly, there is still a need in the art for a wig capable of lifting the skin over a

person's face. Any such device should include a reinforced seam to place the adhesive so as to reduce stretching of the hair net caused by the skin pulling tangentially on the adhesive, thereby maintaining the structural integrity of the hair net and retaining the skin in the lifted position for a longer period of time. The present invention is particularly suited to overcome those problems which remain in the art in a manner not previously known.

Summary of the Invention

The present invention is directed towards a new and improved wig which covers a person's scalp and lifts or tightens the person's face comprising a substantially thin hair net structured to be snugly seated over a person's scalp in covering relation thereto and at least one adhesive pad structured to removably adhere to a person's skin so as to retain the skin over a person's face in a lifted position. The hair net includes a first upper portion, a second adjacent lower portion attached to the first upper portion to form a reinforced seam therebetween and a generally resilient border structured to retain the hair net over the person's scalp. The reinforced seam extends from the temple on one side of the person's head to the temple on the opposite side of the person's head. The adhesive pad is attached to the bottom surface of the border over the reinforced seam. In use, the hair net is positioned over the user's scalp, the border lifted slightly, the user's skin stretched upwards beneath the border and the border lowered so that the adhesive pads adhere to the user's skin, thereby retaining the skin over the user's face in the lifted position.

It is an object of the present invention to provide a new and improved wig which has all the advantages of the prior art devices and none of the disadvantages.

It is another object of the present invention to provide a wig which covers a person's scalp and lifts or tightens the person's face.

It is also an object of the present invention to provide such a wig which includes a reinforced seam to maintain the structural integrity of the hair net.

It is a further object of the present invention to provide such a wig which is capable of retaining the skin in the lifted position for a significant period of time.

These and other objects and advantages of the present invention will become more readily apparent in the description which follows.

Brief Description of the Drawings

5 For a fuller understanding of the nature of the present invention, reference should be had to the following detailed description, taken in connection with the accompanying drawings in which:

Figure 1 is a perspective view of the face lifting wig of the present invention, in partial section, seated on a person's head.

10 Like reference numerals refer to like parts throughout the several views of the drawings.

Detailed Description of the Preferred Embodiment

Before explaining the disclosed embodiment of the present invention in detail, it is to be understood that the invention is not limited in its application to the details of the particular arrangement shown since the invention is capable of other embodiments. Also, the terminology used herein is for the purpose of description and not of limitation.

15 As shown in Figure 1, the present invention is directed towards a new and improved face lifting wig 10 comprising a substantially thin hair net 20 and at least one adhesive pad 40 attached to a bottom surface 22 of the hair net 20. The hair net 20 is structured to include hair thereon and to be snugly seated over a person's scalp 50 in covering relation thereto.

20 In the preferred embodiment, the hair net 20 includes a first upper portion 24 and a second adjacent lower portion 26. The first upper portion 24 and second lower portion 26 are sewn or stitched together to form a reinforced seam 28. The reinforced seam 28 provides greater rigidity and stability than caps having a one-piece construction. Such increased rigidity and stability decreases the stretching inherent in one-piece caps, thereby maintaining the overall shape and integrity of the hair net 20.

25 The first upper portion 24 and second lower portion 26 are preferably structured and

disposed so that the reinforced seam 28 extends from the temple 54 on one side of the person's head to the temple (not shown) on the opposite side of the person's head. The reinforced seam 28 is disposed from temple to temple so as such to create an improved anchor point for the adhesive pad 40. Typically, people have a slight recess and no or little hair at that location. Thus, the adhesive pad 40 will more easily adhere to the person's face at that location. It should be appreciated that the hair net 20 may, alternatively, be constructed of three or more portions, thereby increasing the number of reinforced seams 28, or that the location of such reinforced seams 28 may vary as desired.

The hair net 20 further includes a generally resilient border 30 extending around the outer perimeter 32 of the hair net 20. The border is constructed by applying a coating of a resilient sealing material, such as polyurethane, over the outer perimeter 32 of the hair net 20. The coated border 30 is structured to provide greater structural integrity, stability and retention means than the other portions of the hair net 30, thereby enabling the hair net 30 to removably adhere to the person's scalp 50.

The adhesive pads 40 include an upper side 42 attached to the bottom surface 22 of the border 30 over the reinforced seam 28 and an opposite lower side (not shown) having an adhesive substance thereon. The adhesive pads 40 are structured to removably adhere to a person's skin, thereby retaining the skin over the person's face 52 in a lifted position, as well as providing added retention means for the main member 20. By positioning the adhesive pad 40 in the border 30 over the reinforced seam 28, the material bias or stretching inherent in the hair net 20 will be reduced, thereby maintaining the structural integrity of the hair net 20. Thus, the skin over the person's face 52 will remain in the lifted position for a longer length of time. The adhesive pads 40 may be comprised of double sided tape or any other suitable adhesive material known in the art.

In use, the hair net 20 is positioned over the user's scalp 50 so that it is snugly seated thereon. The border 30 of the main member 20 in the location of the adhesive pads 40 is then lifted slightly, the user's skin stretched upwards beneath the border 30 and the border 30 lowered

so that the lower side of the adhesive pads 40 adhere to the user's skin, thereby retaining the skin over the user's face 52 in the lifted position.

While the invention has been described, disclosed, illustrated and shown in various terms of certain embodiments or modifications, which it has presumed in practice, the scope of the invention is not intended to be, nor should it be deemed to be, limited thereby and such other modifications or embodiments as may be suggested by the teachings herein are particularly reserved, especially as they fall within the breadth and scope of the claims here appended.

Claims

What is claimed is:

1. A face lifting wig comprising:

a substantially thin hair net structured to be snugly seated over a person's scalp in covering relation thereto, said hair net having at least two sections, means for fixedly attaching said sections to one another so as to create a reinforced seam therebetween, and a generally resilient border extending around an outer perimeter of said hair net, said border being structured to retain said hair net over said person's scalp; and

means for retaining the skin over a person's face in a lifted position.

2. A face lifting wig as recited in claim 1 wherein said means for fixedly attaching said sections to one another comprises stitching.

3. A face lifting wig as recited in claim 1 wherein said means for securing the skin over said person's face in a lifted position comprises at least one adhesive pad attached to a bottom surface of said border of said hair net.

4. A face lifting wig as recited in claim 3 wherein a first one of said reinforced seams extends from a temple on one side of said person's scalp to a temple on an opposite side of said person's scalp.

5. A face lifting wig as recited in claim 4 wherein a first adhesive pad is positioned in said border on a first end of said first one of said reinforced seams and a second adhesive pad

is positioned in said border on an opposite second end of said first one of said reinforced seams.

6. A face lifting wig as recited in claim 1 wherein said border is constructed of a coating of resilient material on said outer perimeter of said hair net.

7. A face lifting wig as recited in claim 6 wherein said resilient material is polyurethane.

8. A face lifting wig comprising:

a substantially thin hair net structured to be snugly seated over a person's scalp in covering relation thereto, said hair net having at least two sections, means for fixedly attaching said sections to one another so as to create a reinforced seam therebetween, and a generally resilient border extending around an outer perimeter of said hair net, said border being structured to retain said hair net over said person's scalp; and

at least one adhesive pad attached to a bottom surface of said border of said hair net, said at least one adhesive pad being structured to retain the skin over a person's face in a lifted position.

9. A face lifting wig as recited in claim 8 wherein said means for fixedly attaching said sections to one another comprises stitching.

10. A face lifting wig as recited in claim 8 wherein a first one of said reinforced seams extends from a temple on one side of said person's scalp to a temple on an opposite side of said person's scalp.

11. A face lifting wig as recited in claim 10 wherein a first adhesive pad is positioned in said border on a first end of said first one of said reinforced seams and a second adhesive pad is positioned in said border on an opposite second end of said first one of said reinforced seams.

12. A face lifting wig as recited in claim 8 wherein said border is constructed of a coating of resilient material on said outer perimeter of said hair net.

13. A face lifting wig as recited in claim 12 wherein said resilient material is polyurethane.

14. A face lifting wig comprising:

a substantially thin hair net structured to be snugly seated over a person's scalp in covering relation thereto, said hair net having at least two sections, means for fixedly attaching said sections to one another so as to create a reinforced seam therebetween, and a generally resilient border extending around an outer perimeter of said hair net, said border being structured to retain said hair net over said person's scalp;

a first one of said reinforced seams extending from a temple on one side of said person's scalp to a temple on an opposite side of said person's scalp; and

at least one adhesive pad attached to a bottom surface of said border of said hair net, said at least one adhesive pad being structured to retain the skin over a person's face in a lifted position.

15. A face lifting wig as recited in claim 14 wherein said means for fixedly attaching said sections to one another comprises stitching.

16. A face lifting wig as recited in claim 14 wherein a first adhesive pad is positioned in said border on a first end of said first one of said reinforced seams and a second adhesive pad is positioned in said border on an opposite second end of said first one of said reinforced seams.

17. A face lifting wig as recited in claim 14 wherein said border is constructed of a coating of resilient material on said outer perimeter of said hair net.

18. A face lifting wig as recited in claim 17 wherein said resilient material is polyurethane.

19. A face lifting wig as recited in claim 14 wherein said adhesive pad is double sided tape.

Abstract of the Disclosure

A face lifting wig comprising a substantially thin hair net structured to be snugly seated over a person's scalp in covering relation thereto and at least one adhesive pad structured to removably adhere to a person's skin so as to retain the skin over a person's face in a lifted position. The hair net includes a first upper portion, a second adjacent lower portion attached to the first upper portion to form a reinforced seam therebetween and a generally resilient border structured to retain the hair net over the person's scalp. The adhesive pads are attached to the bottom surface of the border over the reinforced seam. In use, the hair net is positioned over the user's scalp, the border lifted slightly, the user's skin stretched upwards beneath the border and the border lowered so that the adhesive pads adhere to the user's skin, thereby retaining the skin over the user's face in the lifted position.
